The Barracuda in solid 316L stainless steel: 44,100 lumens at 320 W, identical light and identical optics to the cast aluminium version, in a housing that keeps working where corrosion is the deciding factor. For fishing and lift vessels, offshore platforms, chemical plants and quays under permanent salt exposure.

LUMINOUS FLUX	POWER	EFFICACY
44,100 lm	320 W	138 lm/W
INGRESS	**IMPACT**	**BEAM ANGLES**
IP69K	IK10	14 to 69°

Values apply at 6500 K, Ta 25 °C, including lens losses and driver consumption. 4000 K delivers the same luminous flux as 6500 K. Photometry is identical to the cast aluminium Barracuda.

WHY IT IS SPECIFIED

Twenty years of warranty on the housing. Solid 316L, electrolytically polished. Corrosion resistance does not depend on a finish staying intact, so a scratch from a container corner is cosmetic.

Same light, same optics. Identical LED engine and the same four optics as the aluminium Barracuda, so a mixed site keeps one light calculation.

Serviceable driver. The remote driver is the wear part and is replaced without opening the luminaire.

WHERE IT IS USED

- Fishing vessels and lift vessels
- Offshore platforms and jack-ups
- Quays with permanent salt exposure
- Chemical plants and tank farms
- Fertiliser and salt handling
- Waste water and sludge treatment
- Fish processing and cold stores
- Dredging and marine construction
- Shipyards and dry docks
- Container terminals in coastal wind

Light output and optics

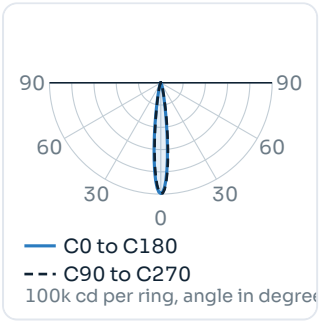

Photometry is identical to the cast aluminium Barracuda and is measured in house to IES LM-79. The IES files are downloadable per optic from the product page.

BEAM CHARACTERISTICS

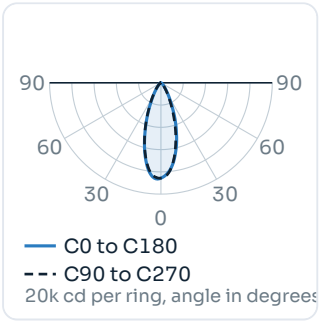

Lens	Distribution	Beam angle 50 % of peak	Field angle 10 % of peak	Typical use
14°	Spot, symmetric	13°	27°	Very long throw, beyond 100 m: high masts, crane booms, stockpiles
38°	Medium, symmetric	37°	70°	Long throw, typically beyond 30 to 35 m: yards, quays, terminals
69°	Wide, symmetric	69°	100°	Up to around 35 m: decks, aprons, platforms, work areas
14° × 46°	Flare, asymmetric	13° × 46°	31° × 70°	Throws far forward and stays wide across: quay edges, roadways

The beam angle is the full angle between the two directions where the intensity has fallen to 50 % of the peak. The field angle uses 10 %. Both are read from the IES files, available per optic on the product page. Lens combinations within one luminaire are possible, and the optic is part of the order code as a suffix, for example .38.

Amber 2200 K	Available on every optic, for light sensitive surroundings
Bi-colour 4000 K with amber 2200 K	Switchable, for sites with a night regime

Nothing is emitted above the horizontal at 0° tilt. That is the figure a permitting authority asks for when a terminal borders a residential area or a protected zone, and it is the starting point for any assessment against NEN-EN 12464-2 and the NSVV guidance on obtrusive light.

REMOTE DRIVER

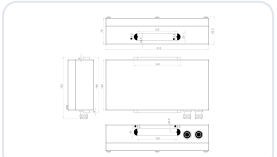

Type	BLD320 for 90–305 VAC · TLD320 for 180–528 VAC
Case temperature	Tc −40 to +90 °C

WHERE IT EARNS ITS PLACE

Where a coating is the weakest link, the Barracuda SS removes it from the equation. Solid 316L, electrolytically polished, with twenty years of warranty on the housing, at the cost of six kilograms over the aluminium version. Where mast load decides and the atmosphere is merely industrial, the cast aluminium Barracuda is the better buy.

Notes. Values are for the standard configuration. A bi-colour or high-CRI build changes the luminous flux, and the quotation states the figure that applies. Photometry, optics and light output are identical to the cast aluminium Barracuda. North American models on request.
